Bug Fixes and Miscellaneous

- [LPLMS-10050] Fixed an issue where excel (.xlsx) report exports render incorrectly when certain fields (such as Manager Email) were blank, resulting in subsequent columns shifting left for affected rows. This problem only impacted .xlsx exports (CSV exports were unaffected) and has now been resolved to ensure blank values render correctly without misaligning columns.
- [LPLMS-7475] We fixed an issue in the Tiles Course Format (format_tiles) where the selected tile could lose its highlight after resizing the screen or reloading a page with a previously selected tile. We also resolved a problem where tiles with a pre-selected state did not close on the first click after page load, ensuring tile state is now correctly initialised and responds as expected.
- [LPLMS-10020] The Start Learning button in the One Click Compliance block has been updated to ensure consistent behaviour when launching a program. Users are now directed to the first course in the first course set, or to their first incomplete course if progress has already been made, rather than being taken to a random course.
- [LPLMS-10099] We've resolved an issue with the LP KPI dashlet where, when the Content Target was set to Learner, the dashlet always displayed "0" assignments as In progress, regardless of the learner's actual course progress. The dashlet has been updated so the count value is no longer shown in this context, preventing misleading or confusing information for learners.

Future Developments

We are working on lots of new features and functionality.
