Product Release Notes

17 June 2026

17/06/2026: Product Release Notes

Bulk Brand Style Management Applying Brand Styles is no longer a repetitive, manual process. You can now bulk apply a Brand Style to multiple projects simultaneously directly from the Brand Style area. By selecting the “Apply to projects” action, a modal will appear allowing you to search, filter, and select multiple projects using checkboxes. After a quick confirmation warning, the style is applied to all selected projects in a single action, and success feedback is displayed.

Button Component Styling Enhancements We have significantly upgraded button customizations and added a live preview in the Button section so you can instantly see the effects of your changes. New granular controls include:

- **Corner Radius:** An adjustable radius control.
- **Shadows:** New settings to define shadow fill, opacity, X and Y offsets.
- **Strokes:** New settings to set stroke colour, opacity, and width

Full-Screen Course Preview To aid in easier content creation, course previews will now automatically open in a new browser window, display in full screen and update live.

New Language Support: Create now officially supports Spanish as an in-app language.
