

Elucidat Create

Product Release Notes

14 July 2026

15/07/2026: Product Release Notes

This release delivers updates that give you control over learner progression, support rich media directly in your pages, and make building projects faster and more intuitive.

New Features & Updates

- **Content Locking Features** – Prevents learners from skipping ahead in projects, ensuring they complete pages before they can advance. It also includes dual preview modes (Author & Learner) to save authors time when verifying project navigation.
- **Completion Indicators** – Ensures it is clear to learners what they have or haven't completed within a project.
- **Embedded Content Component** – Allows you to embed websites or iframes into your projects to support a greater variety of content.
- **Resources Component** – Allows you to upload PDF resources directly within your project.
- **Accessibility Enhancements (WCAG 2.2 AA)** – We have rolled out updates across both Elucidat Author and Elucidat Create to better support WCAG 2.2 AA accessibility standards with many more accessibility updates coming in future releases.
- **Repositioned "Add Section" Button** – The "Add Section" button is now within the middle of the project page to support a more streamlined user experience.
