New: QR Code Access for Continuous Feedback & Recognition 📱

3 February 2026

New: QR Code Access for Continuous Feedback & Recognition

Make feedback easy for deskless and frontline teams

We've introduced **QR code access for Continuous Feedback & Recognition**, making it simple for deskless employees to give and receive feedback directly from their phones—no desktop required.

Overview

Continuous feedback works best when it's timely and accessible. For frontline, mobile, and field-based workers, logging into a desktop app isn't always practical. With QR code access, employees can scan a code posted in their workspace and jump straight into Confirm's mobile web experience to share feedback or recognition in the moment.

Key Highlights

- **Instant mobile access:** Scanning the QR code opens Confirm's login and feedback entry point in a mobile browser.
- **Built for deskless teams:** Ideal for frontline, retail, manufacturing, healthcare, and field-based roles.
- **Full feedback actions supported:** Employees can give recognition, give or request feedback, and add notes.
- **Easy to deploy:** Print and post the QR code in high-traffic areas like break rooms, huddle spaces, or time clocks.
- **Boost engagement:** Makes feedback and recognition part of everyday work—not just performance cycles.

Get Started

Download the QR code, brand your printout, and post it where deskless employees already are.
