

Practice

Now (Next 3 months)	Next (January release)	Later (Active exploration)	Done (Recently released)
Localization (languages) Simulations delivered in learners' preferred language, supporting global teams at scale.	Stories Configurable learning pathways combining simulations, video prologues and epilogues, confidence checks, and assessments.	Simulations in the flow Simulations embedded into performance management and learning workflows, so practice happens in the moment of need.	Reporting Insights (Admin) (Docs) Admin dashboard surfacing simulation activity, usage, progress and scores.
Improved simulation quality More consistent, realistic AI characters that stay in role and behave exactly as configured.	Assessments Introduce pre and post-simulation assessments.	Data integrations Salesforce and data warehouse connections.	Assigned & self-selected simulations (Docs) Configurable learner journeys to access simulations.
Global Settings Reusable characters, success criteria, and resources across simulations - reducing authoring time and improving consistency.	Topics Introduce variants within simulations e.g. same scenario, different difficulties.	Gamification Badges and enhanced leaderboards.	Initial launch version (Docs) AI powered authoring incl. SME collaboration, audio and text conversations, memory, multi-attempt conversations, corrective feedback, configurable safety and privacy, analytics, and more.
Manager reporting Managers can track learner progress, scores, and simulation activity for their team directly within Learn:Up.	Learning recommendations Learners receive recommendations based on conversation feedback.	Multiple characters Multi-character simulations for realistic conversations.
