Learn:Go

Now (GA - end of October)	Next (Next ~6 months)	Later (Active exploration)	Done (Recently released)
Manager analytics New analytics section for managers to follow their team metrics around readiness and behaviour. Ad-hoc assignment of courses New feature to manage the courses assignment where managers can direct learning experiences to their team members as either required or optional. Priority customer fixes The critical and high-priority feedback items raised by our first live frontline customer.	Shared device experience Fast, simple login for shared-device environments, so frontline workers can securely pick up their learning on any device. Onboarding experience A guided first-run experience - a short profile survey plus in-app tooltips - to personalise the app from day one and help learners find their way around. Recommendations v1 First layer of recommendations based on simple signals, surfacing relevant LX/events to learner without manual curation. On-the-job training A brand new process that allows assessors and learners to navigate an assessment experience guided by their Learn:Go App, culminating on an evaluation of the learner.	Skills Skills framework tailored towards the frontline experience. Assess job titles, task requirements, plan careers and understand readiness and capability across the board, powered by an AI companion to support the framework maintenance. Conversational analytics Ask questions of platform data in plain language, "who's overdue on food safety at the Leeds site", and get the answer with a custom chart behind it, without building a report.
