Practice

Now	Next	Later (Active exploration)	Done (Recently released)
	Confidence checks Introduce pre and post simulation confidence checks for learners to help measure ROI impact.	**Multiple characters** Multi-character simulations for realistic conversations.	**Improved simulation quality** (Docs) More consistent, realistic AI characters that stay in role and behave exactly as configured.
	Topics Introduce variants within simulations e.g. same scenario, different difficulties.	**Gamification** Badges and enhanced leaderboards.	**Localization (languages)** (Docs) Simulations delivered in learners' preferred language, supporting global teams at scale.
	Global settings Reusable characters, success criteria, and resources across simulations - reducing authoring time and improving consistency.	**Simulations in the flow** Simulations embedded into performance management and learning workflows, so practice happens in the moment of need.	**Reporting Insights (Admin)** (Docs) Admin dashboard surfacing simulation activity, usage, progress and scores.
	Manager reporting Managers can track learner progress, scores, and simulation activity for their team directly within Learn:Up.	**Stories** Configurable learning pathways combining simulations, video prologues and epilogues, confidence checks, and assessments.	**Initial launch version** (Docs) AI powered authoring incl. SME collaboration, audio and text conversations, memory, multi-attempt conversations, corrective feedback, configurable safety and privacy, analytics, and more.
		Learning recommendations Learners receive recommendations based on conversation feedback.
